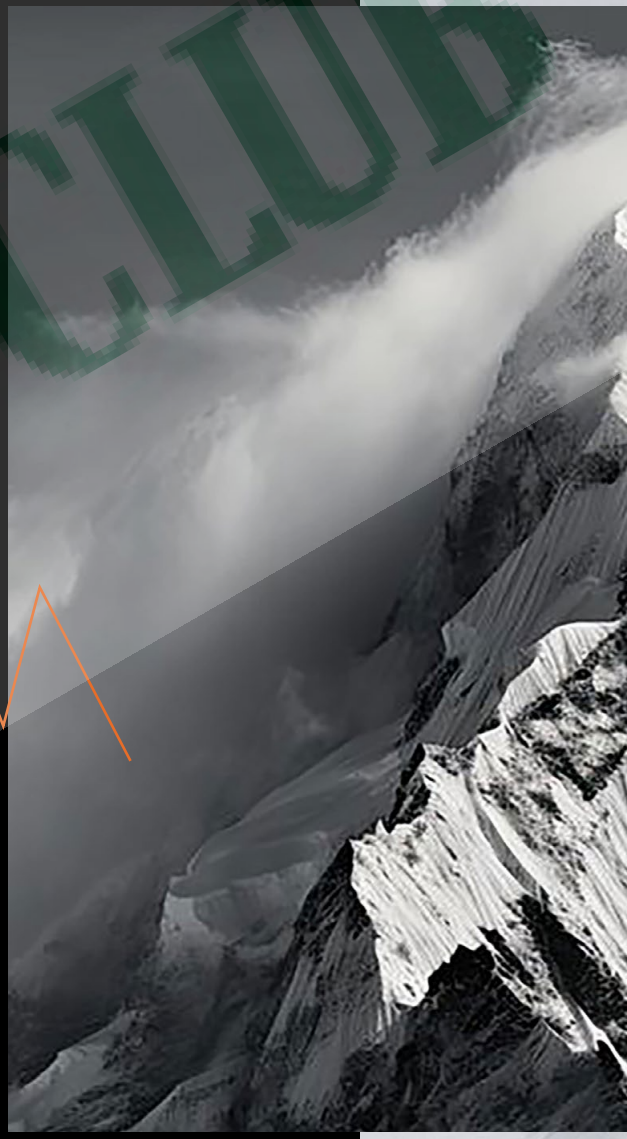
CANDIDE SKIS
FALL WINTER 2025/26

Designed by Candide with premium quality materials, innovative shapes and camberlines, Candide Skis is the pinnacle of a lifetime of research.



PARK 91

Park to piste.

RESORT 101

On-piste, sidecountry.

BC 111

Off-piste to the backcountry.

AK 121

Backcountry to Alaska.

MATERIALS

C-LIGHT CORE

A strong yet lightweight core construction of paulownia and poplar wood, sandwiched between layers of fibreglass and carbon weave. The most durable, lightweight core we've seen in over twenty years manufacturing skis.

CORUND TOPSHEET

A chip-resistant lightly textured topsheet that protects against scratches to keep your skis looking fresh.

P-TEX 4000 BASES

The fastest, most durable production bases you can get.

ROCKWELL STEEL EDGES

Heat-treated steel built to last.

SHAPE+FLEX

TRIPLE RADIUS SIDECUT

A Candide first, our sidecuts feature three separate radii as you move from tip to tail. A tight tip radius makes turn initiation quick. A larger radius in the tail gives a powerful release to the turn and stability at speed. Finally, an even larger radius underfoot means wherever you mount it, the ski will feel consistent.

TAPER

The fatter the ski, the more taper we put from the tip to the tail to help the ski float in powder.

FLEX

We like our skis with a smooth flex over the length of the ski. Our Resort ski has a softer flex to give better feel on pise and in the park, while our BC and AK skis have progressively stiffer flex to retain control and feel at speed.

CAMBERLINES+MOUNTING

ROCKER

Rocker in the tip and tail helps a ski float off-piste. So, the wider the ski, the more rocker we've added. Our Resort ski has a small amount of rocker, the BC a healthy dose, and the AK a LOT.

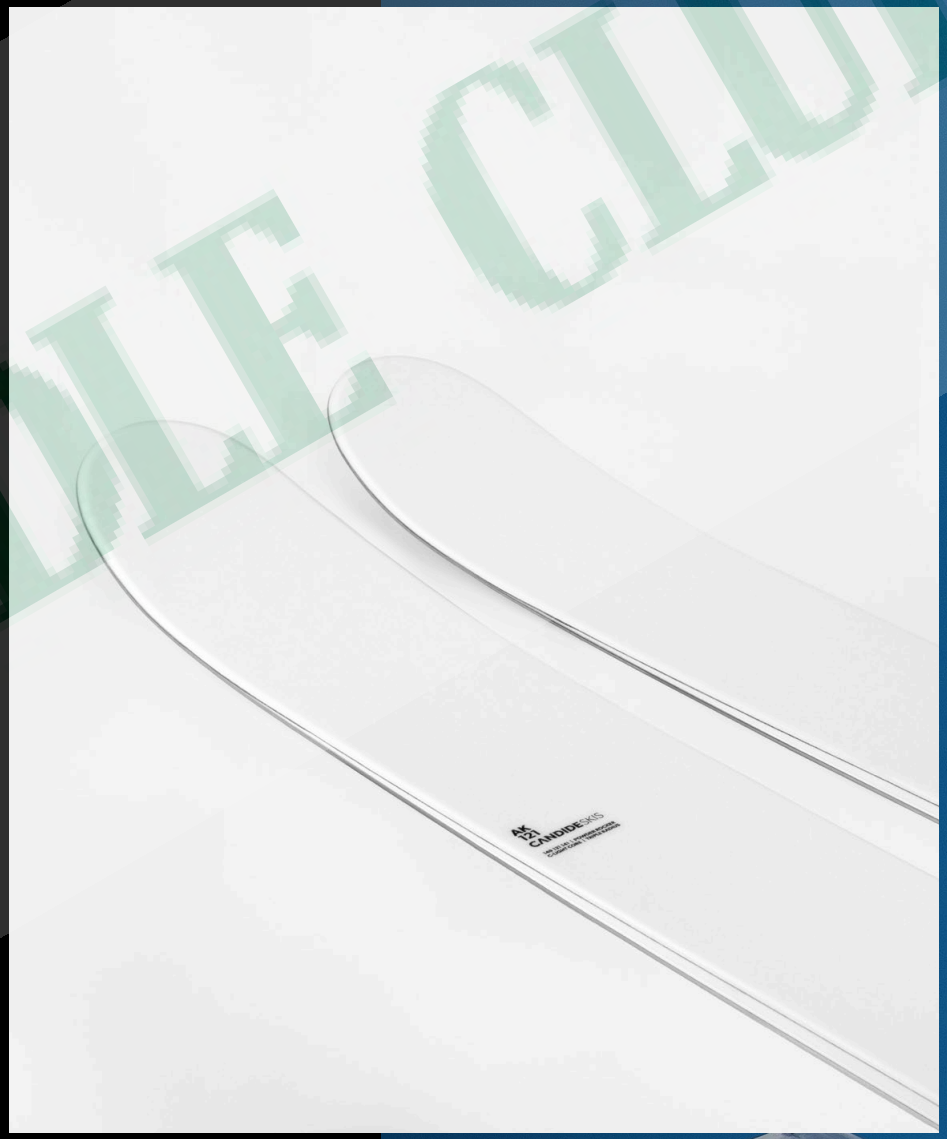
CAMBER

Camber underfoot makes a ski responsive on piste, but harder to ski off-piste. So, our Resort ski has the most camber, the BC a little and the AK none. Makes sense, doesn't it?

DUAL MOUNTING POINTS

If you've played with mounting your skis in different positions, you'll know what you like. For guidance, we've marked two positions on the ski - Candide's personal mounting point, and a 'Regular' mount point that suits most skiers and terrain.

We believe there is an ever-lasting link between nature and riders. We take measures to create products in the most eco-conscious way, and continuously look for new and improved ways to give back.



FSC WOOD

The Forest Stewardship Council A. C. is an international non-profit, multistakeholder organization established in 1993 that promotes responsible management of the world's forests, via timber certification.

All our wood core is FSC certified.

BIO-BASED EPOXY

Our factory has been pioneering the use of bio-based epoxy for many years. This replaces the petro-chemical with renewable materials such as vegetable oils.

This process retains all the strength of a traditional epoxy resin.

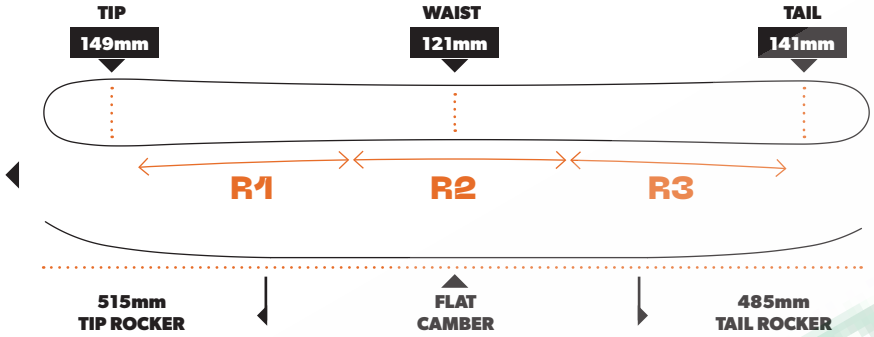
PADDLE CLUB

AK 121

SKF25A-CTAKU

179 • 184 • 190

All marked measurements are for 184cm.



EU Y2

C-LIGHT CORE
- A proprietary mix of paulownia and poplar woods, wrapped in fibreglass and carbon gives a lightweight yet incredibly strong ski full of pop.

DUAL MOUNTING POINTS
- Candide's or Regular.

TRIPLE RADIUS SIDECUT
- Three radii blended together for quick turn initiation, stability at speed and mounting versatility.
- Tip radius: 21m
- Waist radius: 27m
- Tail radius: 23m

POWDER ROCKER
- Lots of tip and tail rocker with flat camber underfoot. Maximum float and instant edge response.
